Dear Ramez and team,

I am writing this testimonial as to the success of recovery our data that have been encrypted with ransomware. We had 7 different keys codes that had locked our accounting, production, banking, R&D data and our past history for the last 15 years. The encryption ransomware had also affected our two external backups and one internal so the process was extremely frustrating.

We had commenced to negotiate with the hackers but to no avail as they had no intention of providing the key codes to decrypt the data. We were put in a very difficult position as we required the data for our business to continue to operate.

After providing Fast Data Recovery an initial assessment was made on the probability of success and it was deemed 95-100% which was amazing news. After 5 days of decrypting each key code on 4 separate servers running in parallel the key decryption codes were broken. The team logged in remotely and decrypted all our data. This was a godsend and we were so excited having our data back.

If anyone needs to speak to myself directly and discuss the process and our experiences directly they are more than welcome .

Kind Regards,

Charles Kalnins
Director
